DETAILED ACTION

Applicants' arguments, filed 17 May 2004, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Claims 13, 14, 16, 17, 19, 25, 26, 34, 36, 39-41, 47, 48, 60, 61, 64-66, 72, 73, 81, and 82 are currently pending.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 13, 14, 16, 17, 19, 25, 26, 34, 36, 39-41, 47, 48, 60, 61, 64-66, 72, 73, 81, and 82 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "sufficient" in claim s 13 and 60 is a relative term which renders the claim indefinite. The term "sufficient" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. Is one nucleotide "sufficient" to target a sequence? Clarification is requested.

Claims 13 and 60 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are as follows: Claim 1 is drawn to a method of designing primers to target a **first** nucleotide sequence with at least one phenotypic

characteristic. The recited steps of the claim, however, fail to establish a relationship between the second nucleotide sequence, that is used to compare to a database and aligned with sequences extracted from the database, and the **first** nucleotide sequence. The second nucleotide sequence is compared to catalogued sequences. Catalogued sequences that contain portions of the second nucleotide sequence are extracted. The second nucleotide sequence is then aligned with the extracted sequences to prioritize most similar to least similar. Primers are designed to the matching portions of the aligned sequences. These matching portions have to be sufficient to target the **first** nucleotide sequence. However, how would one know whether or not the **first** nucleotide sequence actually contained these portions if no alignment has been performed with the **first** sequence? Clarification is requested.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

No claims are allowed.
